

SubmitReview Test Report

We are using Jest to test our code.

Test 1: Fill out the submit review form successfully with the correct values

Objective: Verify that the review submission for is filled correctly and triggers the submission request useForm.post with the expected data.

Steps:

- Render the SubmitReview Page.
- Fill the inputs
 - o Image Upload: profile.jpeg
 - o Name: John Doe
 - o Occupation: Software Developer
 - o Content/Review: This is amazing service!
 - o Star Rating: 4/5
- Click the publish review button.
- Verify useForm.post is triggered with the correct data in FormData format to /post/submitReview

```
render(<SubmitReview/>);

//Get inputs
const file = new File(['dummy image'], 'profile.jpg', { type: 'image/jpeg' });
const imageInput = screen.getByLabelText(/upload your profile picture:/i);
const nameInput = screen.getByLabelText(/name:/i);
const occupationInput = screen.getByLabelText(/occupation:/i);
const contentInput = screen.getByLabelText(/your review:/i);
const starRating = screen.getAllByText('*'); //Rating element
const submitButton = screen.getByRole('button', { name: /publish review/i });

//Simulate file upload
await userEvent.upload(imageInput, file);

//Fill out the form
await userEvent.type(nameInput, 'John Doe');
await userEvent.type(occupationInput, 'Software Developer');
await userEvent.type(contentInput, 'This is an amazing service!');

//Click 4-star rating
await userEvent.click(starRating[3]);

//Check if form values are set correctly
expect(setReviewMock).toHaveBeenCalledWith(expect.objectContaining({
  image: expect.any(File),
}));

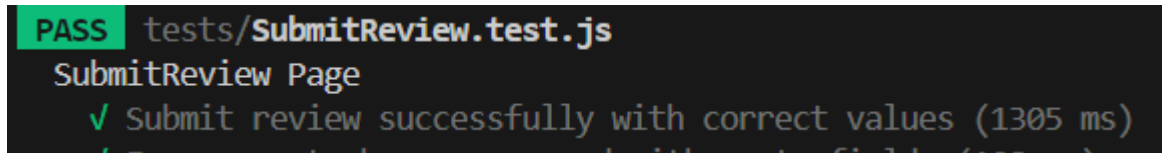

expect(setReviewMock).toHaveBeenCalledWith(expect.objectContaining({
  name: 'John Doe',
  occupation: 'Software Developer',
  content: 'This is an amazing service!',
  rating: 4,
}));

//Simulate clicking the submit button
await userEvent.click(submitButton)

//Wait for the form to be submitted with correct data
await waitFor(() => {
  expect(mockPost).toHaveBeenCalledWith(
    '/post/submitReview',
    expect.any(FormData), // Check for FormData
    {
      headers: {
        'Content-Type': 'multipart/form-data',
      },
    },
  );
});
```

Findings:

- Form was correctly filled.
- setData successfully captured the expected input values.
- useForm.post was called with the correct data and the form was submitted to /post/submitReview.

Test 2: Form does not submit with empty fields

Objective: Ensure that the form does not submit with required fields being empty and that it displays the correct validation errors

Steps:

- Render the SubmitReview page.
- Leave the fields empty.
- Click the public review button.
- Verify that the required fields are marked invalid.
- Ensure that useForm.post is not triggered.

```
test('Form cannot change password with empty fields', async () => {
  const mockPost = jest.fn();
  const setReviewMock = jest.fn();

  useForm.mockReturnValue( {
    data: {
      name: '',
      occupation: '',
      content: '',
      rating: 0,
      image: null,
    },
    setData: setReviewMock,
    post: mockPost,
    errors: {},
  });

  render(<SubmitReview/>);

  //Get Inputs
  const nameInput = screen.getByLabelText(/name:/i);
  const occupationInput = screen.getByLabelText(/occupation:/i);
  const contentInput = screen.getByLabelText(/your review:/i);
  const submitButton = screen.getByRole('button', { name: /publish review/i });

  //Simulate clicking submit button
  await userEvent.click(submitButton);

  //Wait for validation (HTML5 default browser validations)
  await waitFor(() => {
    expect(nameInput).toBeInvalid();
    expect(occupationInput).toBeInvalid();
    expect(contentInput).toBeInvalid();
  });

  //Ensure the post function was not called since the form was not submitted
  await waitFor(() => expect(mockPost).not.toHaveBeenCalled());
});
```

Findings

- The form correctly marked all empty fields as invalid.
- No submission occurred and useForm.post was not triggered.

```
